

About Design Your Recognition (DYZ) GalleryPlaques™ Eco-friendly “green” renewable boards

The board material used to create the GalleryPlaques™ is made from MDF and is a GREEN product in that 100% of its wood content comes from recycled wood.

Many years ago this wood was burned or filled up landfills but is now made into beautiful panels to manufacture moulding, furniture, and cabinets to name a few.

DYZ's Industrial Grade MDF has just received Environmentally Preferred Product (EPP) status from the Composite Panel Association. This certification means that DYZ's panels meet requirements set forth by CARB in relation to formaldehyde emissions. Furthermore, the manufacturer of DYZ's MDF, has been involved in forest stewardship for more than 100 years. Certified by the American Tree Farm System, the company has been a leader in the industry by sustaining forests and the environment through sound environmental management practices.

They will continue to do its part by planting trees, managing timberlands, protecting our rivers and streams, and striving to increase wildlife populations throughout the southeastern U. S., just as we have done for decades.

We trust you will continue to purchase DYZ's plaques, safe in the knowledge that our MDF products are independently verified to come from renewable, sustainable timberland monitored by one of the nation's most respected forest product companies.
